In atherosclerotic patients, progress of the disease is
characterized by a rise in the blood heparin level,
reaching an average of 8.5 units/ml in chronic coro-
nary insufficiency and of 10.2 units/ml in acute myo-
cardial infarction (normal 6.6 units/ml). Investigation
of the clearing factor in 68 subjects revealed a tend-
ency for it to diminish in atherosclerosis (8.9%), par-
